

Ezequiel Cirilo

Senior Product Manager, AI | Agentic & LLM Products | Human-in-the-Loop AI

Cork, Ireland | +353 89 942 0204 | ezequiel.cirilo@gmail.com | [Portfolio](#) | [linkedin.com/in/ezequielcirilo](https://www.linkedin.com/in/ezequielcirilo)

PROFESSIONAL SUMMARY

Product leader who has taken agentic, multi-model LLM systems from 0 to live, customer-facing production, and stayed hands-on through evaluation and operation, not just launch. Designed a dual-model (Anthropic Claude and OpenAI GPT) consensus workflow with confidence-threshold routing, benchmarked and dropped a third model after it underperformed on quality and cost, and built the production dashboards tracking cost, accuracy, and processing time across 500+ audit assessments. Uses Claude directly in daily work, including building production-ready UI from specs with Claude Design. Partners day-to-day with external engineering teams on model integration, endpoints, and failure-handling logic.

SKILLS & TOOLS

- **AI & LLM:** Anthropic Claude, OpenAI GPT, multi-model consensus workflows, prompt engineering, model benchmarking and selection, human-in-the-loop workflow design, production AI monitoring
- **AI Build Tools:** Claude, Claude Design (independent prototyping, spec-to-production-ready-UI)
- **Product & Delivery:** end-to-end product ownership, product roadmapping, feature prioritisation, go-to-market strategy, Agile/Scrum, Jira, Teamwork
- **Research & Data:** primary user research, moderated usability testing (UserZoom), competitive benchmarking, Power BI (incl. Power Query), KPI dashboard design

WORK EXPERIENCE

Head of Product Enablement & Delivery (SaaS) | Global Reviews | Cork, Ireland | Sep 2023 – Jul 2026

- Took over and led the turnaround of an underperforming agentic, multi-model LLM system (Anthropic Claude and OpenAI GPT), reshaping the product, data flow, and validation logic from the ground up after early results fell short; retained parts of the original build where they held up. Result: 93% of AI assessments confirmed correct at QA and a 63% reduction in audit costs and manual assessment time.
- Designed and shipped production error-handling and recovery logic for the QA agent: capped automatic retries within defined time windows to prevent runaway processing and cost, automatic error-state escalation with human notification (assigned QA analyst and study creator), and an automatic recovery/retry flow once service was restored. Live in production.
- Built and used a production KPI monitoring suite tracking cost, accuracy, completeness, and processing time across 500+ assessments and thousands of evaluated criteria, with job-status and refusal-reason tracking and cost-per-assessment benchmarking by industry, reported at operational and board level to guide where AI should scale.
- Shipped an AI QA Copilot combining LLM reasoning with Amazon Rekognition image analysis and human-in-the-loop review, cutting QA cycle time by 69% and QA costs by 61%, with 87% of AI suggestions approved without correction. Separately benchmarked AI monitoring output against known-outcome templates, surfacing a case where the AI's output was correct and the prior human analysis was not.
- Led 0-to-1 delivery of an AI-assisted QA Copilot; kept the classification binary (feature present or absent) with human-in-the-loop confirmation on every flag, minimising hallucination exposure by design rather than by after-the-fact correction.
- Partnered day-to-day with external engineering teams building the AI audit pipeline, working jointly on confidence thresholds, endpoints, and failure-handling logic.
- Replaced the traditional Figma-based design workflow with an AI-native one (Claude Design), independently taking product specs to production-ready UI faster and delivering designs and developer documentation as a single handoff package.
- Refined the autonomous site-mapping and evidence-capture workflow in which the agent reasoned over site structure to identify and screenshot the pages required as QA evidence, shaping prompt design and business logic to raise accuracy and feed directly into the human-in-the-loop review process.
- Led a cross-functional team of six across Product, Engineering and QA in an agile environment, owning roadmap execution and stakeholder alignment across EMEA and APAC.

Head of Digital Transformation | Global Reviews | Cork, Ireland | **Dec 2021 – Sep 2023**

- Cut platform infrastructure costs (cloud hosting, servers, databases) by 74% by leading the product strategy for a full platform rebuild, retiring the legacy system and designing out the architectural redundancies driving its cost base.
- Owned the product vision, roadmap and prioritisation for integrations and automation features, building the structured data foundations and automated workflows that later enabled the platform's AI capabilities.
- Managed the end-to-end product lifecycle from ideation to launch across multiple concurrent releases, applying agile and design-thinking practices across engineering, design and marketing to shorten release cycles.
- Analysed adoption, satisfaction and engagement KPIs alongside user feedback to identify optimisation opportunities, directly informing roadmap priorities and UX enhancements.
- Partnered with marketing, sales and support on go-to-market strategies and launch plans, increasing user adoption and activation.

Digital Experience and Process Innovation | Global Reviews | Cork, Ireland | **Sep 2020 – Dec 2021**

- Co-developed a data-driven feature prioritisation methodology combining user research and market data to quantify feature impact and deliver segment-level recommendations, informing investment decisions and product roadmaps for major players in regulated sectors including insurance, banking and energy.
- Conducted user research, competitive analysis and moderated usability testing to uncover underserved needs and emerging trends, refining product features and improving usability.
- Ran sprint planning and review ceremonies across engineering and product teams in an agile environment, ensuring timely delivery of concurrent feature releases.

Business Analyst | Global Reviews | Cork, Ireland | **Jan 2020 – Sep 2020**

- Pioneered the adoption of Power BI across the organisation, designing the data visualisation standards and dashboards that later evolved into a client-facing analytics product used by 300+ product managers and UX teams at leading brands to inform their product roadmaps.
- Designed a form interaction cost methodology identifying high-friction steps in quote and application journeys, directly informing the redesign of the credit card, mortgage and transaction account application journeys at a major Australian bank.

Process Improvement Analyst | Big Carnes | Salvador, Brazil | **Sep 2018 – Jan 2020**

- Built a maintenance control dashboard visualising asset utilisation and service metrics, increasing problem resolution rate by 32% within one month.
- Introduced an omnichannel customer feedback framework spanning physical and digital touchpoints, strengthening real-time satisfaction tracking and accelerating issue resolution.

Supply Chain Manager | Mahalo | Salvador, Brazil | **Aug 2014 – Jul 2016**

- Streamlined the inventory audit process by developing a smart tagging system that reduced audit time from 2 months to 6 hours.
- Designed and implemented an automated feedstock request platform, cutting processing time from 5 days to 4 hours.

EDUCATION

University College Cork | MSc Design & Development of Digital Business | Grade: 1H1 | 2019 – 2020

Salvador University | BSc Business Administration and Management | Grade: 1H1 | 2012 – 2016
